Group LS Standard Locksets

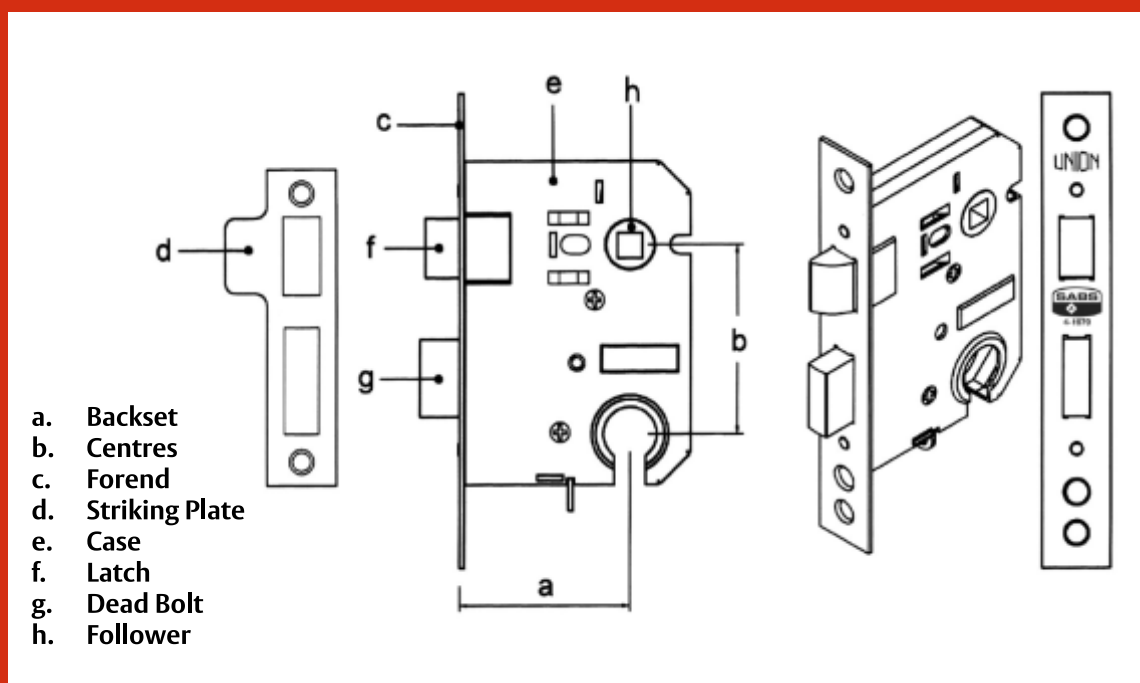

The term Lockset indicates a combination of a lock (and cylinder where appropriate) and pair of lever handles.

The above are illustrated elsewhere in the Catalogue as individual elements and can be specified as such. However, we recommend that they are specified as locksets as this offers pricing and handling advantages.

UNION offer a range of two, three and four lever as well as pin tumbler cylinder locksets all of which carry the SABS mark of approval. These locksets are suitable for use in public, commercial, institutional, industrial and residential buildings.

Lock Terminology

Standard Grade Locksets

'Standard' Grade locksets are designed to meet the demand for lower cost locksets by Private and Public Sector developers who need to meet strict budgetary constraints. The locksets are "value engineered" to meet functional requirements at reduced costs. ASSA ABLOY do not guarantee their performance in high traffic situations and in conditions where they could be subject to abuse.

Keying Options

In the specifications on each of the following pages in this section, it is indicated, under "Keying Options", that locks are "To Differ (i.e. Standard) – this indicates locks can be supplied with a standard range of different keys. This range varies from 20 in the case of certain 2 lever locks to 5000 in the case of pin tumbler cylinders.

Packing Quantities
